With three available models; R, A and M-Spec, Sightmark has created resilient close-range optics perfect for everything from target shooting to law enforcement and military operations on both AR platform firearms and shotguns. All RAM series sights are now powered by a CR123A battery, which provides superior battery life (200-2,000 hours) over other red dots and reflex sights. A wide lens quickens target acquisition while helping to maintain a wide FOV. Quick-detach models include an improved QD lever allowing a low profile to keep the sights from snagging on gear or unlatching during the heat of the moment.
