

VIPER[®] HD

85mm SPOTTING SCOPE RETICLE EYEPiece

ELEVATOR PITCH:

Built for the Viper[®] HD 85mm spotting scope, the Viper[®] HD Reticle Eyepiece allows you to precisely call your partner's shots using the MOA or MRAD model. No more guessing at the distances of missed shots, or just calling "High/Low" or "Left/Right." Make precision calls for far better follow-up shots without having to buy a new spotter. If you know a few simple calculations, you can even range distances!

WHY DID WE MAKE THIS EYEPiece?

We developed this eyepiece to make easy work of spotting for a shooting partner, and for yourself. With the Viper[®] HD Reticle Eyepiece, you can call shots as easily for your partner as if you were watching through their riflescope! Because it's an interchangeable eyepiece, your 85mm Viper[®] HD spotting scope can go from the perfect spotter to the perfect shot calling tool, and back again, quickly and easily.

HOW DOES THIS UNIT COMPARE TO THE 20-60X EYEPiece AND RAZOR[®] RETICLE EYEPiece?

The Viper[®] HD Reticle Eyepiece is 33.5x fixed magnification, with a reticle for ranging distance and 18mm of eye relief. The subtensions go out to 41 MOA / 11 MRAD on the horizontal stadia and 37 MOA / 9 MRAD on the vertical stadia. The eyepiece is the same HD optical system as the 20-60x eyepiece. The Razor[®] HD Reticle Eyepiece is a fixed 22x magnification, wide-angle eyepiece with a longer eye relief.

HOW DOES THIS OPTIC STAND UP AGAINST COMPETITIVE MODELS?

The interchangeability makes this a very competitive product, allowing you to have one spotting scope with different eyepieces to meet your needs.

WHAT ARE THE TOP USES FOR THIS PRODUCT?

Spotting for yourself or your partner while long-range shooting, both calling shots and ranging targets.

CAN I USE THIS EYEPiece ON THE 65MM VIPER[®] SPOTTING SCOPE?

No. This eyepiece was designed for the 85mm Viper[®] HD spotting scope, and the subtensions are only accurate on the 85mm model.

WHERE IS THIS UNIT MADE?

China.
